

Just White Light

Well when you see a rainbow, here's a fact
With seven colors, it is slacked.
Red and Orange and Yellow too
There's a Green and then of course there's Blue

Indigo – Violet
Add them all, and white you'll get.
Seven lights – They will give
Plain white light. It's ROYGBIV!

A rainbow is just white light, just white light, just white light.
A rainbow is just white light, just white light, just white light.
A rainbow is just white light, just white light.
A rainbow is just white li.....ght, just white light.

(Interlude)

Reflection means when light comes in
It bounces back right out again.
Refraction's when the speed gets changed
And bends the light. It's rearranged!

Reflect means bounce. Refract means bend.
Light is scattered in the end.
Darks absorb. Lights reflect.
How can we keep it straight, my heck?!

Light is scattered, bounced or bent, bounced or bent, bounced or bent.
Light is scattered, bounced or bent, bounced or bent, bounced or bent.
Light is scattered, bounced or bent, bounced or bent.
Light is scattered, boun.....ced, bounced or bent.

A rain-bow-is-just-white-light – just white light, just white light.
A rain-bow-is-just-white-light – just white light, just white light.
A rain-bow-is-just-white-light – just white light, just white light.
